Ferrocell

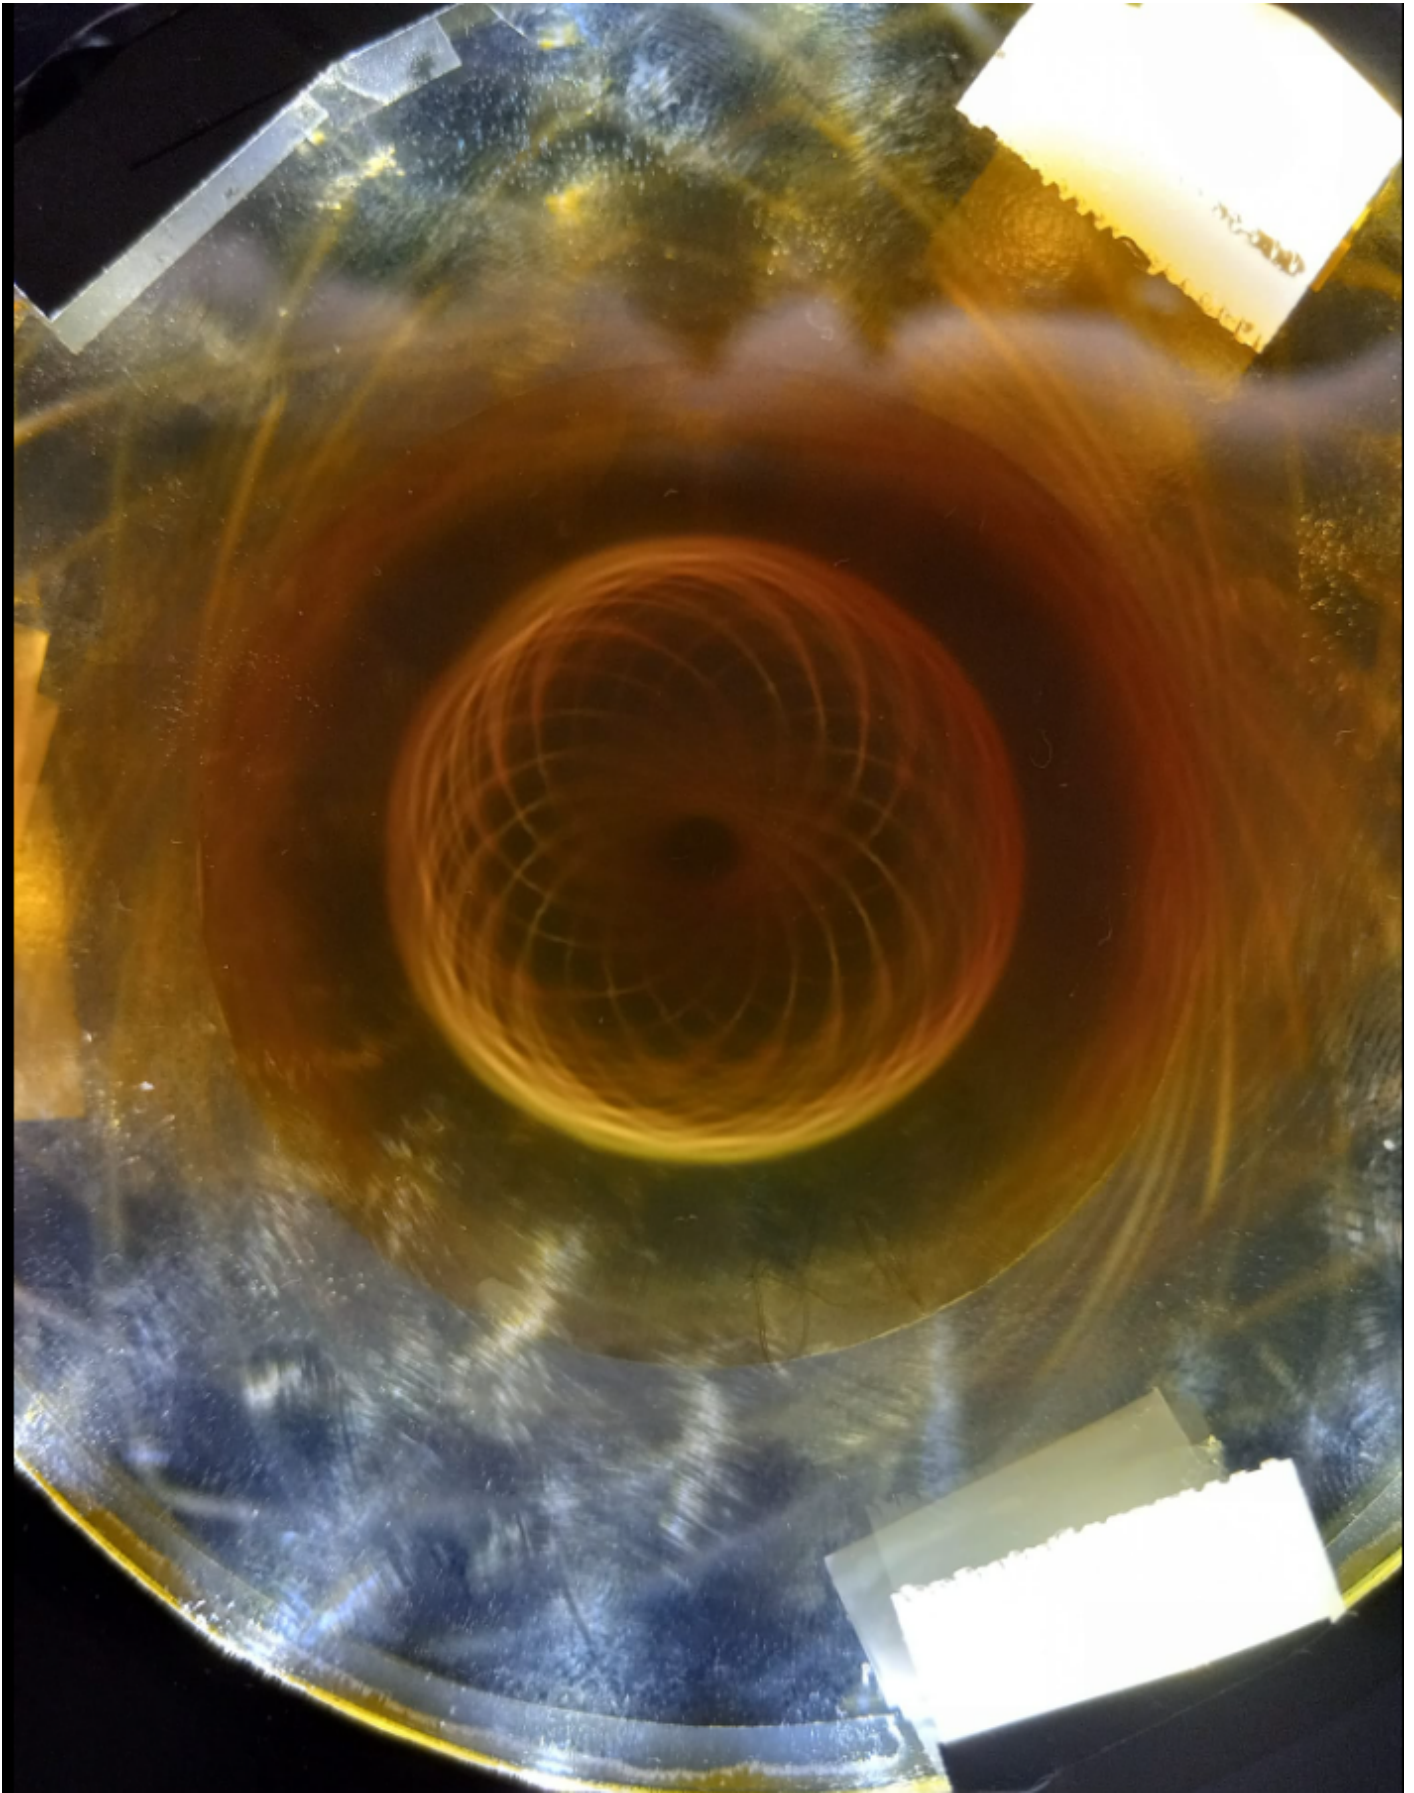

Some of the solutions used in making a Ferrocell can be toxic if mishandled. This page is not intended to instruct or inspire to replicate. If reader chooses to do so, reader accepts any/all risks associated.

Ferrocell is a device originally invented by Timm Vanderelli (patent link below), and demonstrated on Ken Wheeler's YouTube channel (

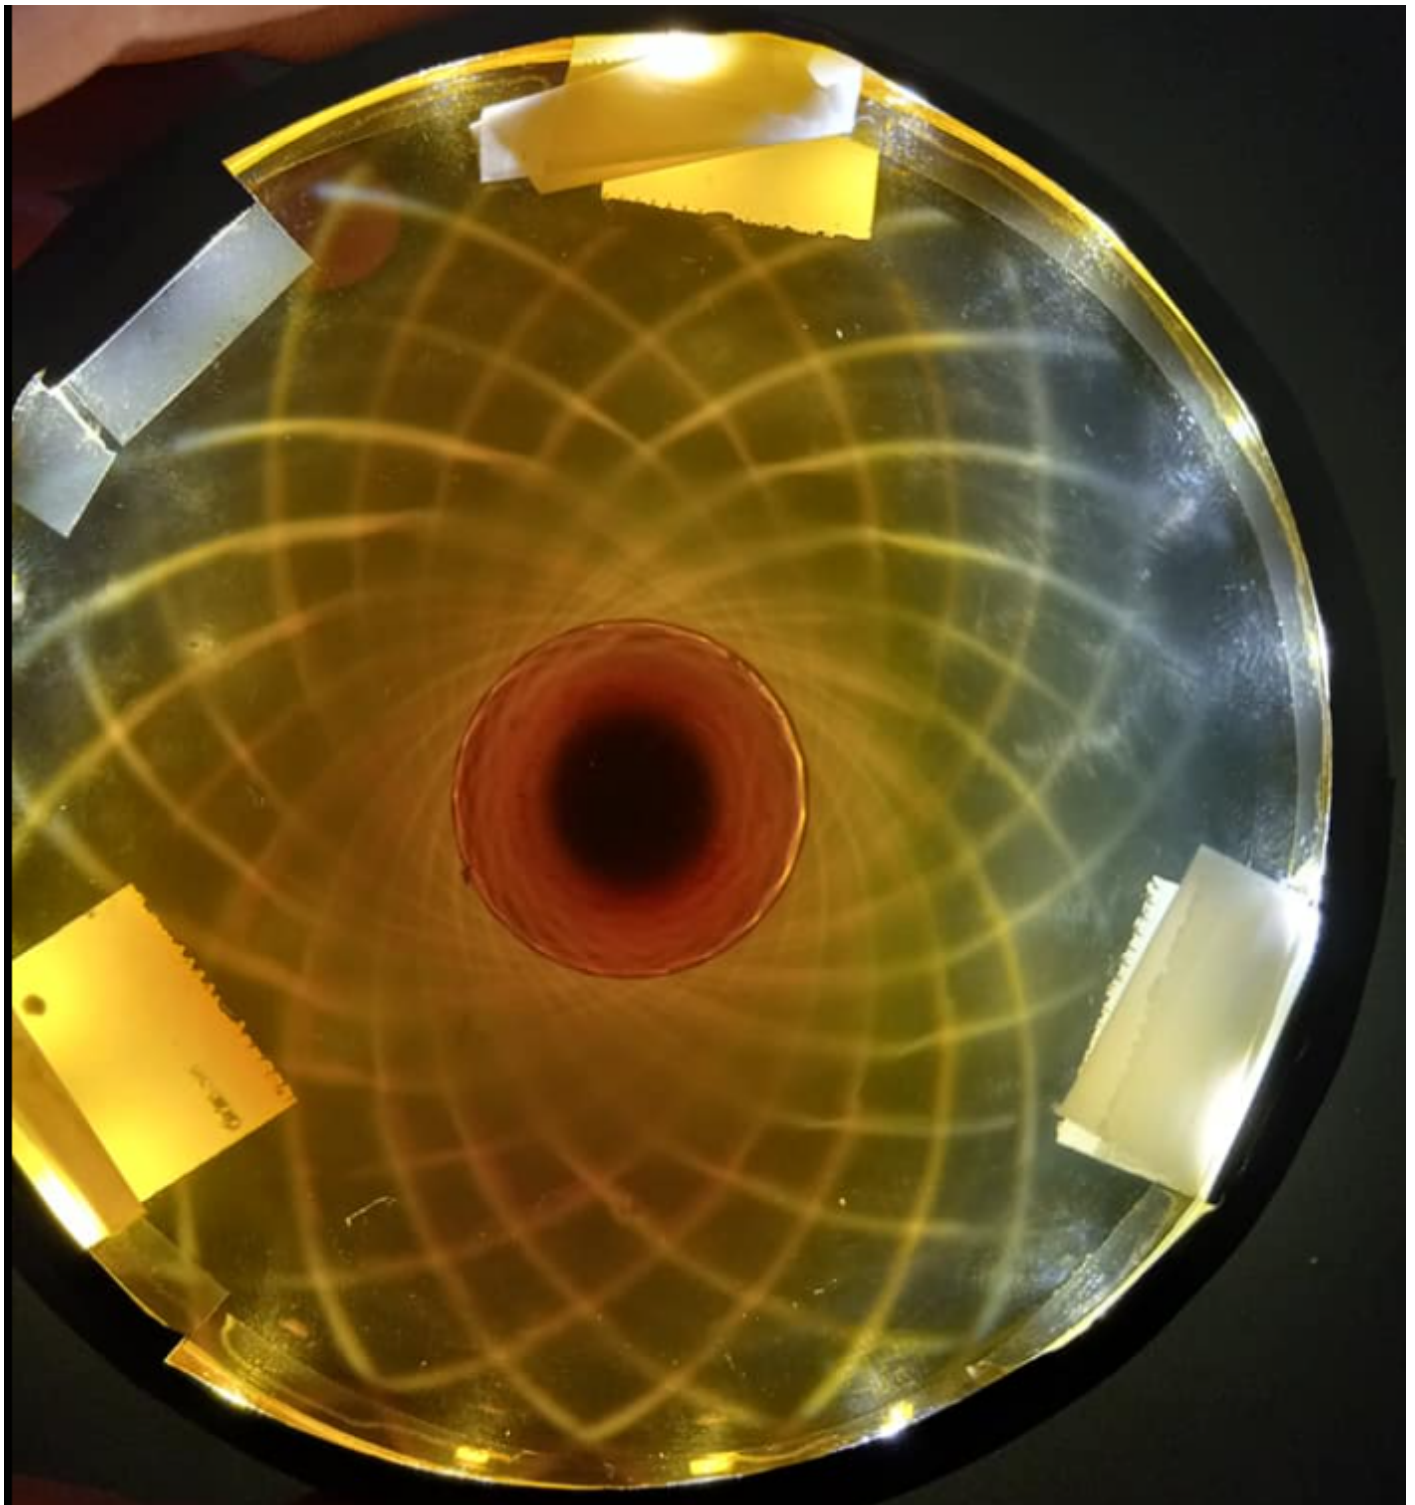

<https://www.youtube.com/watch?v=Tn4fkkyJIBg>) The apparatus is simple in its design, only being composed of two sheets of circular flat glass with a micro thin solution of ferrofluid and carrier fluid in between. LED lights are positioned at the outer periphery of the two glass pieces to allow viewing of magnetic fields.
