# Welcome

My name is Ethan Crowder. Thank you for visiting my website. I've pursued independent research for years, spending many hours reading books, patents and government reports. I've come to discover countless individuals, forgotten by our modern society, who've inspired me to begin a journey of experimenting and validating their technology and methods. This site exists to provide an open source knowledgebase for working towards enlightenment and independence of the people. I provide technological analysis, reverse engineering, and experimental verification of the subject matters contained herein.

## Please Read:

I understand that many visitors may not possess a technical background. In recognition of this, I've provided a "layman's area" page that provides a simplistic overview of the possibilities if the

technology I cover herein were to be implemented. To view that page please click here: [Layman's Area](#)

Please understand that I work a full time job and maintain this site myself. Because of how life works, updates will not always be consistent. If you're inspired after visiting, please share. The knowledge contained herein is free to be shared. Interests below will be expanded as time goes on.

**Please note, that all information is intended for educational purposes only. There is equipment/methods covered on this site that can pose a danger to those who are not skilled in the technical fields. By continuing to visit this site, you (the reader/visitor) understand/agree that I accept no liabilities if you attempt to replicate. Information presented on this site is not encouragement to replicate.**

## Current Interests:

- 1.) [Automated agricultural systems](#) utilizing open source microcontrollers.
- 2.) The water fuel technology of [Stanley Meyer](#). To learn who he was, please watch this short [Stan Meyer Introductory Video](#).
- 3.) Expanding knowledge on [individuals that should be known](#) and their important contributions towards real progressive technologies.
- 4.) Investigation into the use of high voltage DC fields, what is known as [Electroculture](#), to increase agricultural production.

5.) Investigation into the use of magnetic fields, what is known as [Magnetoculture](#), to increase agriculture production.

6.) Utilizing narrow wavelengths of light, what is called [Light Therapy](#), in healing related areas.
